ZAP

METAL CLEANER & BRIGHTENER **ZENEX NUMBER 107705**

DESCRIPTION

ZAP is an advanced acid aluminum trailer cleaner designed to clean and brighten oxidized aluminum. ZAP contains wetting agents and emulsifiers to aid in the removal of road and atmospheric films on aluminum surfaces.

FEATURES AND BENEFITS

ZAP is a concentrated, non-streaking, fast acting product that cleans without brushing. ZAP removes the heaviest deposits of road film, dirt, exhaust deposits and oxides in seconds.

APPLICATIONS AND USES

Use ZAP to clean and brighten over-the-road and delivery trailers, tanks and other aluminum surfaces. ZAP may be used in pressure washers, steam cleaners, foam guns, and other mechanical or manual applications. **DO NOT USE** on glass, fiberglass, ceramic surfaces, concrete, aircraft material, anodized or highly polished metal, magnesium wheels, and painted surfaces. Always test in an inconspicuous area first.

DIRECTIONS

ZAP is a concentrate and must be diluted before use. ZAP may be diluted with 5 to 120 units of water. For badly oxidized trailers, dilute 1 part with 5 to 10 parts water. For regular cleaning, dilute 1 part to 50 to 120 parts water. Apply diluted ZAP to the trailer with a brush or spray from the bottom up. Rinsing can begin 15 seconds after applied. Do not allow ZAP to dry on trailer.
